

Rodent Checklist

Because of the many circumstances which remain out of our control concerning structural issues with the exterior of homes, you might want to take advantage of our quarterly rodent/insect control program.

1. If you would please move as much away from the walls in the basement as you can.
2. Do not remove any rodent droppings, this will aid in the control process.
3. Please remove any debris around the exterior foundation.(brush piles, lumber, overgrown weeds, etc.)
4. The service technician will do a complete inspection inside and outside. Then will talk to you about what type of control methods would be best to use.
